

Fountain TECH Pump User Guide.

This manual covers installation, maintenance and safety instructions for the following UL-approved FT-2500 Energy efficient pump.

INSTALLATION

Submersed: Place your pump on the top of a flat brick or stone at the bottom of your water garden. Elevating the pump off the basin bottom will help prevent the debris from interfering with the pump's performance. To test performance, completely submerge the pump under water and plug into a GFCI outlet.

Outlet Tube: You will notice the outlet tube can be connected to several sizes of tubing. Always trim to the largest-sized tubing. The larger the inside diameter tubing, the greater the output.

CAUTION: ALWAYS UNPLUG THE PUMP BEFORE HANDLING.

- * Make sure the pump is fully submerged.
- * Check tubing for kinks or obstructions and ensure pump outlet is clear of objects.
- * Check water inlet for any obstructions.

- 1. Always unplug the pump from the electrical outlet before handling it.**
- 2. Keep the pond water clean.**
- 3. Always operate the pump completely submerged. Check the water level daily to ensure the pump will be pumping plenty of water. If water levels are too low and the pump cannot pull enough water, it can sustain damage. Add water if necessary.**
- 4. Clean the pump periodically to prevent mineral deposits and contamination.**

Product is not to be operated below 41F—Freeze Damage May Occur. If the pump is installed outdoors in a freeze zone, ensure all water is removed and the unit is completely dry and stored in a frost-free area.

1. To reduce risk of electric shock, always unplug the pump from the electrical outlet before handling or cleaning the pump.
2. To reduce risk of the electric shock, inspect the pump and the cord for damage before installation or maintenance---replace pump if damage is found.
3. Do not exceed proper voltage as indicated on the pump's cord labels. A GFCI outlet is required.
4. Always keep the cord away from high temperature and heat.
5. To achieve the best flowing performance, the pump should be placed on a flat surface.
6. Do not let the pump run dry as this will shorten the pump's life.
7. Do not lift, hang, or pull the pump by the power cord.
8. Do not pump heated liquids.

Safety Notes:

Fountain Tech Pumps are carefully inspected and tested to ensure both safety and operating performance. However, failure to follow the instructions and warnings in this guide may result in pump damage and /or serious injury. Fountain Tech will not be held liable for any damage resulting from failure to observe this guide's instructions.

Warranty

Fountain TECH guarantees this product for a period of 24 months. Guarantee is void if the product is misused or tampered with.

Customer must include receipt with defective pump. If the pump is found to be defective, Fountain TECH will repair it or replace it with a new one.
